

# Anthony Lu

New York, NY | luanthony523@gmail.com | 737-484-6609 | LinkedIn | GitHub | luanthony.xyz

## Education

### New York University

B.A. Computer and Data Science, Minor in Mathematics - **GPA 3.82/4.00**

New York, NY

Expected May 2027

**Coursework:** Parallel Computing, Machine Learning, Deep Learning & LLMs, Data Structures, Algorithms, Computer Organization, Linear Algebra, Probability & Statistics, Calculus III.

## Skills

**Languages:** Python, JavaScript/TypeScript, Java, SQL, C/C++, Go, Swift, HTML/CSS

**Frameworks:** React, Node.js, Next.js, FastAPI

**Cloud/Infra:** GCP (Vertex AI, BigQuery, GCS), AWS, Git, Docker

**ML/Data:** PyTorch, scikit-learn, Weights & Biases, Pandas, NumPy, HuggingFace

## Experience

### InterSystems

*Data Platforms Intern*

Boston, MA

May 2026 - August 2026

- Incoming Data Platforms Intern developing data infrastructure and developer tooling for InterSystems IRIS.

### DermImpact

*Founding Engineer*

New York, NY

February 2026 - May 2026

- Developed a full-stack platform (**Next.js**, **TypeScript**) for dermatologic notes generation and image analysis.
- Architected secure patient data pipelines with **RLS** and **image encryption** for HIPAA-compliant workflows.
- Led **onboarding** and **integration** with a practicing dermatologist, shaping features from clinical workflows.
- Leveraged usage analytics (**PostHog**) and clinician feedback to refine UX and model outputs.

### Biokind NYU Chapter - Reproductive Health Access Project

*Data Engineer*

New York, NY

January 2026 - May 2026

- Engineered **Python ETL pipelines** to process and normalize **35k+** donor and health resource records, enabling nonprofit organizers to optimize outreach strategies.
- Architected a **FastAPI** system to orchestrate ETL pipelines, automating **database maintenance** via API integrations, reducing manual data processing time by **60%** and accelerating data delivery to organizers.

### Pulse Foundry

*Software Engineer*

New York, NY

December 2025 - May 2026

- Built and deployed an automated newsletter pipeline (**FastAPI**, **Supabase**, **OpenAI**) with **concurrent ingestion**, **semantic ranking**, and **scheduled workers**, serving **3,000+** subscribers.
- Developed **React** dashboard enabling editors to review, filter, and tune pipeline parameters in real time.

## Projects

### Neural-ViT - Vision Transformer for Neural Signal Classification

*Personal Project*

GitHub

December 2025 - January 2026

- Implemented a **3D Vision Transformer** with **PyTorch** for genotype classification on multi-trial neural spectrograms, achieving **0.96 AUC** (+9% over baseline models).
- Built end-to-end cloud-native ML pipeline processing **77k+ trials** using **BigQuery**, **GCS**, and **Vertex AI** with preprocessing, experiment tracking, and reproducible GPU training runs.
- Optimized training efficiency via techniques such as **mixed precision** and **learning rate scheduling**.

### AdaHealth - AI Health Assistant

*Pulse NYC Agentic AI Hackathon - 1st Place*

GitHub

December 2025

- Developed an AI health companion using **OpenAI** + **Node.js** that conducts voice check-ins with patients, performs real-time **semantic safety scoring**, and logs transcripts for caretaker review.
- Built a **React** dashboard tracking patient health and conversation metrics across sessions, with **MongoDB**.
