New York, NY | luanthony523@gmail.com | 737-484-6609 | LinkedIn | GitHub | luanthony.xyz

EDUCATION

New York University

New York, NY

B.A. Computer and Data Science, Minor in Mathematics - GPA 3.82/4.00

January 2024 - May 2027

Relevant Coursework: Deep Learning & LLMs, Agile & DevOps, Machine Learning, Parallel Computing, Data Science, Data Structures, Algorithms, Computer Organization, Linear Algebra, Probability & Statistics.

SKILLS

Languages:	Python, JavaScript/TypeScript, Java, SQL, C/C++, HTML/CSS
Frameworks/Libraries:	React, NodeJS, FastAPI, Tailwind
Cloud/Infra:	GCP (Vertex AI, BigQuery, GCS), AWS, Git, Docker, Supabase, Firebase, Convex
ML/Data:	PyTorch, scikit-learn, Pandas, NumPy, OpenCV, HuggingFace, LangChain

EXPERIENCE

Biokind NYU Chapter - Reproductive Health Access Project

New York, NY

Data Engineer

January 2026 - Present

- Developed **Python ETL workflows** to process and normalize **35k+** donor and health resource data.
- Implemented database management optimization to support analytics pipelines.
- Automated repetitive administrative workflows, reducing manual data processing time.

Pulse NYC

New York, NY

Software Engineer

December 2025 - Present

- Built and maintained a **FastAPI**-based automated newsletter pipeline using **Supabase** and **OpenAI**, serving **500+** subscribers.
- Designed **LLM-driven** content ranking and summarization pipeline using **embeddings** and **semantic filtering** to generate publish-ready newsletters.
- Developed an internal **React** dashboard for editors to review content and tune pipeline parameters.
- Supported hackathons and technical events, contributing to **110+ registrations** for the latest event; upcoming events include industry sponsorship such as **Vercel v0**.

PROJECTS

Neural-ViT - Temporal Vision Transformer for LFP Classification

GitHub

Personal Project

December 2025 - January 2026

- Implemented a **3D Vision Transformer** with **PyTorch** for genotype classification for multi-trial LFP spectrograms, achieving **0.96 AUC** (+9% over logistic regression baseline).
- Incorporated modern training and hyperparameter optimization techniques.
- Built end-to-end cloud-native ML pipeline processing **77k+ trials** using **BigQuery**, **GCS**, and **Vertex AI** with preprocessing, experiment and checkpoint tracking, and reproducible GPU training runs.

AdaHealth - AI Voice Health Companion

GitHub

Pulse NYC Agentic AI Hackathon - 1st Place

December 2025

- Built an AI health companion that conducts check-ins with elderly patients and logs transcripts for analysis.
- Developed a **React** dashboard for caretakers that tracks health/well-being scores and conversation metrics.
- Implemented backend pipeline using **Node.js** + **MongoDB** and integrated **OpenAI** models for real-time voice calls, semantic transcript analysis, and safety scoring.

Openbook CLI - Private Research Toolkit

GitHub

Personal Project

November 2025

- Designed a **TypeScript** CLI with local/remote indexing, async ingestion, and **sub-second semantic retrieval** over a **ChromaDB** vector using **LangChain**.
- Implemented modular provider routing across Ollama and cloud LLM APIs.
